Asset Management Services

Testimonial:

Douglas Shire Council – Post Height Asset Management Review

“ In January 2017, Douglas Shire Council engaged Sail Structures Asset Management Services to survey our playground assets subject to internal shade sail height criteria. Sail Structures recommended a management plan to achieve the outcome required by Council. An Asset evaluation, including engineering, was conducted identifying non-compliant playgrounds. Solutions were achieved with an RPEQ engineer that met Council structural and height criteria, before Project prioritisation and Resource allocation occurred, to complete the management plan. This could not have been achieved without Sail Structures’ industry experience and understanding of the Asset Management Practices of local government. ”

RAINBOW SHADE

Z16
